2025

SEED GUIDE

CORN | SILAGE | SOYBEANS
SORGHUM | ALFALFA

A man wearing a white cowboy hat and a light-colored button-down shirt is kneeling in a field of dry, golden-brown grass. He is holding a brown and tan dog. In the background, there is a dense green cornfield under a clear sky.

ROOTED IN CONFIDENCE

With LG Seeds, you know what you're going to get on every acre, every day. Our corn hybrids are tested locally to deliver dependable yield. And our experts are there when you need them, bringing the product knowledge and field service you need to keep your operation running like you expect it to.

○ Plant with confidence, plant with LG Seeds.

STRONG ROOTS GREAT PARTNERSHIPS

A great partnership is born out of strong roots and a simple promise to be the best partner possible. That's LG Seeds. A brand of AgReliant Genetics, LG Seeds is focused solely on seed and delivering high-performing and unique genetics in North America.

FOCUSED SOLELY ON SEED

We focus solely on seed to ensure our hybrids fit what growers want, always with an eye toward future needs and potential risks.

ONE-OF-A-KIND, DIVERSE HYBRIDS

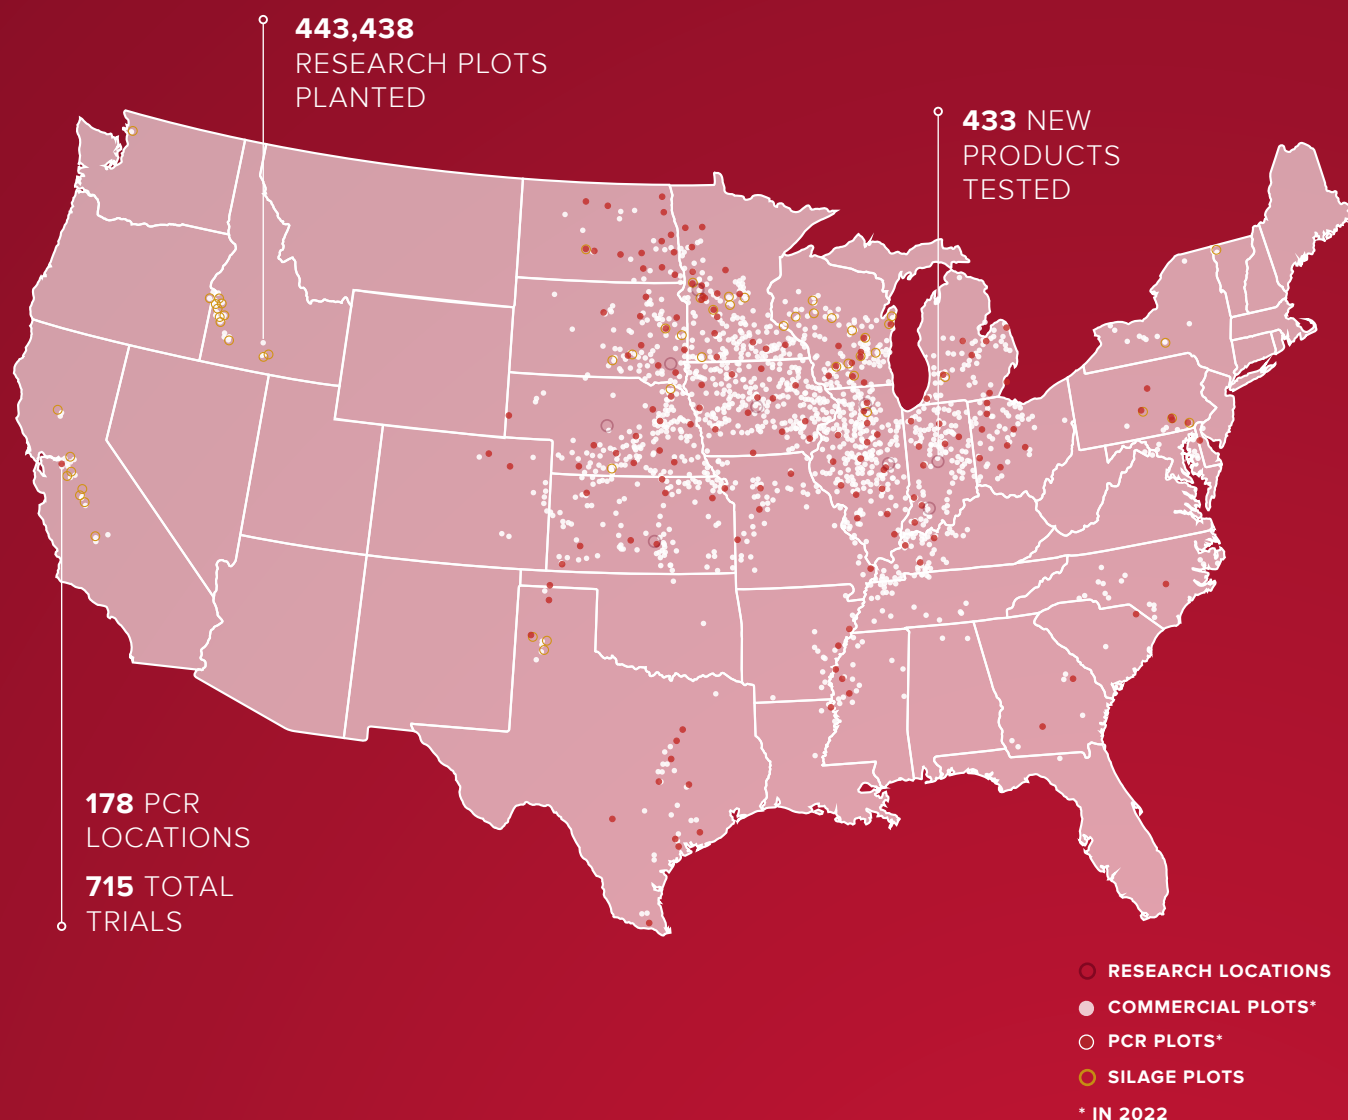

LG Seeds offers a variety of one-of-a-kind, diverse seed options that deliver agronomic strengths and protection to maximize yields and mitigate grower risk and uncertainty.

HIGH-PERFORMING HYBRIDS

Our high-performing seed portfolio drives genetic gain on every acre to achieve yield and production goals. Growers can have confidence in our seed performance.

Proven in your fields

LG Seeds harnesses global research to offer a diverse seed portfolio with unique genetics proven to thrive in a wide range of growing conditions. And our experts bring it back to your fields, with rigorous testing to help us put the right seed on your farm.

Your challenges **DRIVE OUR PRIORITIES**

Our research and development program centers on our growers and their priorities. Every year our team prioritizes performance and health to combat the challenges growers face in their fields.

How do we do it? It starts with 100% focus on seed—no extras, no nonsense, just developing good seed, proven to deliver. As a part of AgReliant Genetics, our access to unique global germplasm lets us introduce seeds never-before seen in North America and develop hybrids to test locally, giving our growers trusted hybrid solutions to win the yield battles. These solutions help provide reliable results in the field with genetics and technology to help fight diseases and resist pests, mitigating risk for our growers.

PROTECTION ABOVE & BELOW

Thanks to a two-pronged approach, your crops gain protection from a range of above- and below-ground pests. Our hybrids feature a full range of traits and treatments to address any challenges you may encounter, ensuring maximum protection.

ABOVE GROUND

A broad and unique portfolio of trait offerings to protect your plants—ear, leaf, and stalk—from a range of above-ground pests to set your fields up for success.

ABOVE & BELOW GROUND

For added protection, we offer multiple trait stacks with both above- and below-ground modes of action to combat corn rootworm, in addition to above-ground pests.

Vayantis® fungicide seed treatment offers the most powerful compound to protect corn seedlings from Pythium, giving you the added security of knowing your corn genetics are protected. Now included in all LG Seeds hybrids treated with Acceleron® or AgriShield® seed treatment.

PYTHIUM PROTECTION

Pythium poses a huge threat for corn growers, causing more damage than Fusarium and Rhizoctonia seedling diseases combined.

Available in three modes, Acceleron® treatment packages combat early-season disease, insects, and nematodes.

	ACCELERON®	ACCELERON® PONCHO®/VOTIVO®	ACCELERON® PONCHO® 1250/ VOTIVO®
SMARTSTAX®	--	✓	--

ACCELERON® PONCHO®1250/
VOTIVO® ○ P1250 rate Poncho®/VOTIVO® insecticide ○

FUNGICIDES

Advanced early- to mid-season protection against soil- and seed-borne diseases, including Fusarium, Rhizoctonia solani, and Pythium.

+INSECTICIDES

Controls over 15 corn insect pests, safeguarding your crops from early season pests: wireworm, seedcorn maggot, white grub, grape colapsis, and black cutworm.

+NEMATICIDES

Protection from a wide range of nematode species.

AgriShield® seed treatments offer your crops the opportunity to fulfill their genetic potential in the field. With the combination of fungicides, insecticides, and nutrients; you can rely on the benefits of strong roots, disease protection, and insect control for maximum yield.

AGRISHIELD® ST ○ CZ250 rate of Cruiser® insecticide ○

AGRISHIELD® MAX ○ CZ500 rate of Cruiser® insecticide ○

FUNGICIDES

Early season protection for consistent control against soil-borne and seed-borne diseases:

- Rhizoctonia
- Pythium
- Fusarium
- Penicillium
- Rhizopus
- Cladosporium

+INSECTICIDES

Always-on protection for control against a wide range of insects, including:

- Wireworm
- Black Cutworm
- White Grub
- Corn Rootworm
- Seedcorn Maggot
- Flea Beetle
- Grape Colaspis
- Chinch Bug

+NEMATICIDES

Safeguards your crops against the damage of targeted nematode species:

- Sting
- Spiral
- Root-Knot
- Stunt
- Needle
- Root-Lesion
- Lance
- Dagger
- Stubby Root

+BIO-ENHANCERS

Nutrient package with zinc showing 10-year internal data with a 3.3 bu/A advantage.

Mode of Action = Control or Suppression of Pest  Single Mode Activity  Dual Mode Activity  Triple Mode Activity

*Please read seed tag to confirm the herbicide tolerance of the refuge component before use of glufosinate or glyphosate. DuPont Pioneer claims suppression of corn earworm on Optimum® AcreMax® 1, Optimum® AcreMax®, and Optimum® AcreMax® Xtreme labels with Herculex® I technology. Cry1A.105 and Cry2Ab2 from B.t. controls or suppresses corn earworm. Syngenta claims suppression of corn earworm with Bt11. Performance may vary from location to location and from year to year, as local growing, soil, and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible and should consider the impacts of these conditions on the grower's fields. DuracadeViptera®, Viptera® Z3, Viptera®, and Agrisure Viptera® 3110 contain Artesian® technology.

CORN LEGEND

AGRONOMIC CHARACTERISTICS

Relative Maturity (RM)

Based on physiological maturity and harvest moisture.

Silage Proven

Rating based on digestibility and net energy on a per-acre basis. Our Silage Proven products undergo rigorous testing and measurements against industry standards to determine their value compared to existing corn silage hybrids.

Early Vigor

Emergence and early growth. Longest markers are fastest.

Greensnap Tolerance

During periods of rapid growth, before pollination, some products are more susceptible to summer stalk breakage when subjected to high winds. Across the Corn Belt, the summer stalk breakage potential increases to the West. Shortest markers are most susceptible to breakage.

Drydown

Longer markers indicate faster drydown. Use to compare with products of similar maturity.

Staygreen

Ability of the plant to maintain photosynthates in the leaves and stalk longer during the season.

Drought Tolerance

Longer markers indicate tolerance to heat stress and drier conditions. Not an absolute rating, as extreme conditions will likely affect performance.

Test Weight

Longer markers indicate heavier test weights.

Harvest Appearance

Longer markers indicate better plant intactness later into the harvest season.

GDD

The number of heat units (Growing Degree Days) required by a corn plant from the time it is planted to reach silk, pollen, and black layer.

CROP MANAGEMENT

Plant Population

Desired final population stand. This should be adjusted to specific management and environmental circumstances.

Continuous Corn

Takes into account the overall health rating of a product because of increased disease pressure of planting corn following corn.

Adapt To No-Till

This rating is closely related to emergence and early growth, as soils planted no-till are often colder and wetter.

PLANT HEALTH

Fungicide Response

Low, moderate, or high indicates response to fungicide application in adverse disease environments.

Disease Tolerance

In adverse disease environments, the longest marker indicates high tolerance and shortest indicates poor tolerance.

Tar Spot

Tar Spot is a yield-harming fungus indicated by small raised black circular stromata on the leaves. Markers indicate tolerance (longest marker), moderate tolerance, and moderate susceptibility.

PLANT CHARACTERISTICS

Flowering for Maturity

Flowering occurs earlier, at the same time (mid), or later as compared to similar maturity products.

Plant Height

Medium-Short, Medium, Medium-Tall, or Tall.

Ear Height

Low, Medium-Low, Medium, Medium-High, or High.

Ear Type

Semi-Flex, Flex, or Fixed.

CHARACTERISTIC INDICATORS

New Product

BIG5 Product (regional guides only)

Silage Proven

COMMON ABBREVIATIONS

NCLB Northern Corn Leaf Blight

SCLB Southern Corn Leaf Blight

GLS Gray Leaf Spot

ASR Anthracnose Stalk Rot

HEC Hard Endosperm Corn

PRODUCT RATINGS

Product rating characteristics are assigned by LG Seeds based on comparisons with other LG Seeds products, not competitor products, through in-house field testing. Performance may vary from location to location and from year to year, as local growing, soil, and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible and should consider the impacts of these conditions on their fields.

Rating Markers

Visual markers are used to indicate ratings, replacing the numeric values used in previous seed guides.

Indicates moderate rating (>6)

Indicates good rating (6-7)

Indicates very good rating (8)

Indicates excellent rating (9)

Indicates no value available or not applicable

RELENTLESS SOYBEAN SEED PROTECTION

Plant with confidence knowing you've chosen a professional-grade seed treatment system for your soybeans. AgriShield® seed treatment is backed by proven performance that provides top-of-the-line protection against insects, nematodes and seedling diseases. No matter the challenge, AgriShield® is always on.

AgriShield® PLUS provides enhanced plant vigor from a powerful combination of fungicides and insecticides. It delivers protection from a wide variety of above- and below-ground insects. It defends against major soil- and seed-borne diseases as well as promotes emergence.

This treatment enhances your yield potential by maximizing your protection against all major insects and diseases, including two of the most significant contributors to soybean yield losses: Sudden Death Syndrome (SDS) and nematodes.

Saltro® seed treatment is the latest technology advancement that protects the root system by providing superior protection against SDS (*Fusarium virguliforme*) and nematodes, while reducing stress on the plant.

AGRISHIELD® PLUS

Fungicide + Insecticide

AGRISHIELD® MAX W/SALTRO®

Fungicide + Insecticide with Saltro® and Inoculant

FUNGICIDES

Five fungicides for disease-fighting protection against:

- Early-Season Phytophthora
- Pythium
- Rhizoctonia
- Fusarium
- White Mold or Seed-Borne Sclerotinia
- Seed-Borne Phomopsis

+INSECTICIDES

Maximized protection against all major insects:

- Aphid
- Bean Leaf Beetle
- Grape Colaspis
- Leafhopper
- Seedcorn Maggot
- Thrips
- White Grub
- Wireworm

+NEMATOCIDES

Protection from a wide range of nematode species.

SOYBEAN

LEGEND

CHARACTERISTICS

Relative Maturity (RM)

Based on physiological maturity and harvest moisture.

Emergence

Rating based on speed of emergence and length of the hypocotyl. Longest marker indicates a soybean with quick emergence and a long hypocotyl.

Early Vigor

Early development after emergence is important for seedling establishment and early vegetative growth of soybeans.

Standability

Lodging resistance scores are taken at maturity. Longest marker means all plants are erect. Shortest marker means all plants are flat.

Shattering

Visual evaluation of the number of open pods three to four weeks after maturity. Longest marker means no shattering. Shortest marker means 50% or greater shattering.

Plant Height

Short, Medium-Short, Medium, Medium-Tall, or Tall.

Plant Type

The amount of branching at lower nodes of the stem: Thin-Line, Medium, Medium-Bush, or Bush.

Pubescence Color

Color of the plant at harvest.

Flower Color

Color of the flower during bloom.

Hilum Color

Color of the area of the seed that attaches to the seed pod wall.

Pod Color

Color of the pod at harvest.

Metribuzin Tolerance

Plant sensitivity to applications of metribuzin herbicide. Longer markings indicate higher tolerance.

PPO Tolerance

Tolerance to applications of PPO herbicides. Longer markings indicate higher tolerance.

PLANT HEALTH

Phytophthora Field Tolerance

Varieties susceptible to Phytophthora Root Rot are not all damaged to the same degree. Highly tolerant varieties grow and produce good yields once past the seedling stage. Longer markers indicate higher tolerance.

Phytophthora Race Resistance

None = No specific race resistance.

Rps1a denotes resistance to Races 1, 2, 10, 11, 13-18, 24, 26, 27, 31, 32, and 36.

Rps1c denotes resistance to Races 1-3, 6-11, 13, 15, 17, 21, 23, 24, 26, 28-30, 32, 34, and 36.

Rps1k denotes resistance to Races 1-11, 13-15, 17, 18, 21-24, 26, 36, and 37.

Rps3a denotes resistance to Races 1, 2, 5, 8, 9, and others.

Brown Stem Rot

Longer markers indicate resistance. Medium markers are tolerant and the shortest marker indicates susceptibility.

Soybean Cyst Nematode Resistance

Resistance source specified within each product.

Iron Deficiency Chlorosis

Longer markers indicate higher ratings. Medium markers indicate an acceptable rating, even in moderately severe conditions.

Sclerotinia White Mold Tolerance

Longer markers indicate higher ratings. Medium markers indicate an acceptable rating, even in moderately severe conditions.

Sudden Death Syndrome

Longer markers indicate higher ratings. Medium markers indicate an acceptable rating, even in moderately severe conditions.

Frogeye Leaf Spot

Longer markers indicate higher ratings. Medium markers indicate an acceptable rating, even in moderately severe conditions.

Charcoal Rot

Longer markers indicate higher ratings. Medium markers indicate an acceptable rating, even in moderately severe conditions.

Stem Canker

Longer markers indicate higher ratings. Medium markers indicate an acceptable rating, even in moderately severe conditions.

MANAGEMENT

Adaptation to No-Till

Because soils that are no-till planted are often colder and wetter, this rating is closely related to emergence and early growth. Longest marker indicates excellent emergence and early vigor in no-till environments.

Salt Excluder

Have a gene specific to handling excess amounts of sodium chloride, storing any extra chloride in the roots of the plant.

Sulfonylurea Tolerance

Exhibits more tolerance to certain ALS herbicides than conventional soybeans and is used as an alternative weed control option or for planting in a field with residual ALS herbicides.

HIGH VALUE OF NEW BRANDED SEED

Latest technology

- Highest yielding soybean technology available
- Leading seed treatment choices

Customer service

- Dealer agronomic support before and after the sale
- Replant policy support
- Convenient packaging and delivery

Reliable germination and quality

- Rigorously tested for quality and meets U.S. Federal Seed Act requirements
- Free of seed-borne diseases
- Properly stored and conditioned

SEED PIRACY DOESN'T PAY

Seed containing a patented trait can only be used to plant a single commercial crop. It is unlawful to save and replant Roundup Ready 2 Yield® soybeans, Roundup Ready 2 Xtend® soybeans, and XtendFlex® soybeans. Additional information and limitations on the use of these products are provided in the Technology Stewardship Agreement and the Bayer Technology Use Guide: tug.bayer.com. U.S. patents for Bayer technologies can be found at the following webpage: cs.bayerpatents.bayer.com.

PRODUCT RATINGS

Soybean varieties with the same resistance genes may perform differently because of different levels of field tolerance. Scores and characteristics are assigned by LG Seeds based on comparisons with similar maturity LG Seeds products through internal field testing. Performance may vary from location to location and from year to year, as local growing, soil, and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible and should consider the impacts of these conditions on their fields.

TRAIT VERSIONS

This table contains the value-added trait versions currently offered for soybeans:

CONVENTIONAL Indicates a conventional (non-traited) product

XtendFlex® soybean

Roundup Ready 2 Xtend® soybean

Enlist E3® soybean

HERBICIDE CHOICES

With the herbicide choices available in the U.S. market, careful planning and attention to labels is more important than ever when selecting and managing herbicide-tolerant soybeans.

	ROUNDUP READY 2 XTEND SOYBEANS	XTENDFLEX SOYBEANS	Enlist E3 SOYBEANS

*Approved for dicamba formulations **Approved 2,4-D formulations

PREFERRED PLACEMENT ZONE

Preferred Placement Zones represent the best areas of adaptation for a product based on in-field observations, genetic background, and trial data. Products may fit within only a portion of a zone, and products may perform well in other areas not identified. Contact your sales team for details.

LGS00820XF 0.08 RM

LGS00820XF performs well across North Dakota, the Red River Valley region, and throughout Northern Minnesota. Providing a great agronomic package and adapting to varying soil types, it holds its height in stress environments and offers excellent performance in no-till situations in all row spacings.

High yielding product

Strong standability

Excellent emergence/no-till performance

CHARACTERISTICS

MANAGEMENT

DISEASE TOLERANCE

NOTES

LGS00901E3 0.09 RM

LGS00901E3 yields very well on productive soil, and the yield holds up on tougher soils. This is a true go-anywhere type of soybean. Poorly drained soils are covered with Rps3a PRR tolerance and great PRR field tolerance. A very good IDC rating allows placement on some of the hottest soils.

High yielding product

IDC tolerant

Phytophthora Root Rot tolerant

CHARACTERISTICS

MANAGEMENT

DISEASE TOLERANCE

NOTES

LGS0111RX

0.1 RM 

LGS0111RX is adaptable to varying soil types and holds its height in stress environments. It provides excellent performance under reduced tillage situations and in most row spacings.

Superior plant health

Reliable across multiple environments

IDC tolerant

CHARACTERISTICS

MANAGEMENT

DISEASE TOLERANCE

NOTES

LGS0105E3

0.1 RM 

Strong stress tolerance allows LGS0105E3 to excel in low-yield environments while a great disease package provides strong performance on highly productive acres. LGS0105E3 has an intermediate plant structure that is best suited to narrower rows.

High yielding product

Strong standability

Phytophthora Root Rot tolerant

CHARACTERISTICS

MANAGEMENT

DISEASE TOLERANCE

NOTES

LGS0125XF

0.1 RM 

Great PRR and SCN resistance make LGS0125XF a good option for your most productive soils where IDC isn't an issue. Strong emergence and vigor are great for those no-till acres.

Flexible row spacing

Responds well to high management

Phytophthora Root Rot tolerant

NOTES

LGS0405E3

0.4 RM

LGS0405E3 provides an excellent option for Northern geographies with Peking resistance to Soybean Cyst Nematodes. It also offers good tolerance to SWM and IDC.

High yielding product

Peking-Soybean Cyst Nematode tolerant

IDC tolerant

CHARACTERISTICS

MANAGEMENT

DISEASE TOLERANCE

NOTES

LGS0444XF

0.4 RM

LGS0444XF provides growers with an enhanced agronomic package - improved disease scores, wide adaptability, and great emergence - that allow it to be planted across portions of the U.S.

Flexible row spacing

Superior plant health

Excellent emergence/no-till performance

CHARACTERISTICS

MANAGEMENT

DISEASE TOLERANCE

NOTES

LGS0701XF

0.7 RM 

LGS0701XF handles medium to medium-high pH soils and has White Mold tolerance, allowing for flexibility in placement. Good stress tolerance allows for its placement on lighter, coarser soil types while the maturity leans toward the early side of 0.7. Reduce populations slightly in narrow rows.

Strong standability

Reliable across multiple environments

CHARACTERISTICS

MANAGEMENT

DISEASE TOLERANCE

NOTES

CONVENTIONAL

LGS2329 is a great conventional product across a wide geography. It has a solid agronomic package with Peking resistance, SWM, IDC, and SDS and is suitable for most row spacings and soil types.

IDC tolerant

High yielding product

Drought tolerant

CHARACTERISTICS

MANAGEMENT

DISEASE TOLERANCE

NOTES

LGS2334XF

2.3 RM 

LGS2334XF has great plant height that holds under stress and stands well. It is suitable in no-till and minimum tillage. Seed treatments may improve PRR field tolerance; SWM score is average.

Excellent emergence/no-till performance

High yielding product

IDC tolerant

CHARACTERISTICS

MANAGEMENT

DISEASE TOLERANCE

NOTES

LGS2348E3

2.3 RM 

LGS2348E3 is well adapted for no-till, conventional, or minimum-till practices. These medium height plants handle a variety of soils and row spacings well, and the strong defensive package allows broad placement in challenging environments. Strong IDC tolerance for high pH fields.

High yielding product

Strong standability

Superior plant health

CHARACTERISTICS

MANAGEMENT

DISEASE TOLERANCE

NOTES

LGS2364XF

2.3 RM 

LGS2364XF can be used as an early planting choice and in no-till and minimum tillage. It can handle drought and its yields were progressively better in high-yield environments.

NOTES

CONVENTIONAL

Conventional herbicides can diversify weed control modes of actions in a farming operation. LGS2801 is widely adapted to soils and planting regimens with height maintained under stress; place from Northeast Nebraska to Ohio and East. Good for no-till and minimum tillage.

High yielding product

Strong standability

Superior plant health

CHARACTERISTICS

MANAGEMENT

DISEASE TOLERANCE

NOTES

LGS2850XF

2.8 RM 

LGS2850XF has top-end yields and the ability to go across many soil types. Excellent emergence gives it great adaptability for no-till and minimum tillage and it can thrive in all row spacings. Additional management is advised in fields prone to White Mold.

Drought tolerant

Flexible row spacing

Strong SDS tolerance

CHARACTERISTICS

MANAGEMENT

DISEASE TOLERANCE

NOTES

LGS2881E3

2.8 RM 

Solid agronomics and the great yield potential of LGS2881E3 give it the ability to work with most acres and management practices. Excellent emergence and early vigor give this soybean great flexibility on planting practices.

High yielding product

Flexible row spacing

Superior plant health

CHARACTERISTICS

MANAGEMENT

DISEASE TOLERANCE

NOTES

LGS3000E3[®]

3.0 RM

LGS3000E3 provides proven yield with Sulfonylurea tolerance. Very good SDS tolerance, combined with solid agronomics, make it a well-balanced product.

Drought tolerant

Superior plant health

Strong SDS tolerance

CHARACTERISTICS

MANAGEMENT

DISEASE TOLERANCE

NOTES

LGS3098XF

3.0 RM

The plant style and disease package of LGS3098XF allow for broad placement across many soil types in this maturity. Manage early season PRR concerns with an appropriate seed treatment. Consider IDC tolerance on high pH soils. Place and manage for high-yield potential.

Excellent emergence/no-till performance

Responds well to high management

Superior plant health

CHARACTERISTICS

MANAGEMENT

DISEASE TOLERANCE

NOTES

CONVENTIONAL

Conventional herbicides can diversify weed control modes of actions in a farming operation. Place LGS3101 from Eastern Nebraska to Ohio and East; its best performance has been in its adapted maturity zone. Good for no-till and minimum tillage.

NOTES

C3400

3.4 RM **CONVENTIONAL**

Conventional herbicides can diversify weed control modes of action in a farming operation. C3400 maintains its height under stress and is widely adapted to soils and planting regimens. It provides top performance in any row spacing.

High yielding product

Reliable across multiple environments

IDC tolerant

CHARACTERISTICS**MANAGEMENT****DISEASE TOLERANCE****NOTES**LGS3445E3[®]3.4 RM 

LGS3445E3 provides a balanced agronomic package - paired with excellent top-end yield potential - with great protection against SCN with Peking resistance and Sulfonylurea tolerance.

Peking-Soybean Cyst Nematode tolerant

Strong standability

Phytophthora Root Rot tolerant

CHARACTERISTICS**MANAGEMENT****DISEASE TOLERANCE****NOTES**

LGS3588XF

3.5 RM 

LGS3588XF features a medium-bush plant type adapted to common row widths with excellent emergence for the early planting window on no-till fields. Saltro® seed treatment will be beneficial on fields with higher SDS potential. Follow label rates when applying Metribuzin and PPO herbicides.

Strong standability

Flexible row spacing

Phytophthora Root Rot tolerant

CHARACTERISTICS

MANAGEMENT

DISEASE TOLERANCE

NOTES

LGS3688E3

3.6 RM 

LGS3688E3 is adapted across the Midwest and is a stand-out product in the East. Very strong emergence and vigor make this product a great fit for no-till plantings. Sulfonylurea tolerance allows this product to follow wheat.

Drought tolerant

Strong standability

Superior plant health

CHARACTERISTICS

MANAGEMENT

DISEASE TOLERANCE

NOTES

LGS3745

3.7 RM **CONVENTIONAL**

The agronomic package - including Sulfonylurea tolerance - of LGS3745 allows for wide adaptation, disease resistance and tolerance, and good standability. Fast emergence and strong early vigor allow for good adaptation to no-till and early planting. Has Sulfonylurea tolerance.

NOTES

LGS3804E3[®]3.8 RM 

LGS3804E3 provides yield, plant style, and the defensive package to cover a majority of acres providing solid stress tolerance and great performance across the Midwest.

High yielding product

Strong standability

Superior plant health

CHARACTERISTICS

MANAGEMENT

DISEASE TOLERANCE

NOTES

LGS3933XF

3.9 RM 

LGS3933XF is adapted to a wide range of soil types East to West. Sulfonylurea tolerance furnishes herbicide options and has advantages as a double crop behind wheat. It adapts well to narrow rows and is a good fit for no-till acres.

Excellent emergence/no-till performance

High yielding product

Superior plant health

CHARACTERISTICS

MANAGEMENT

DISEASE TOLERANCE

NOTES

LGS4020E3 is an offensive style soybean with great performance across most geographies. This robust variety is armed with Enlist E3® herbicide tolerance for difficult-to-control weeds.

Strong standability

High yielding product

Responds well to high management

CHARACTERISTICS

MANAGEMENT

DISEASE TOLERANCE

NOTES

LGS4172XF has a very broad usage area and is extremely versatile across planting systems, soil types, and overall management systems. Can be utilized as an early- or no-till choice with strong emergence and early vigor. A good choice for first crop or double crop planting.

Reliable across multiple environments

Flexible row spacing

Superior plant health

CHARACTERISTICS

MANAGEMENT

DISEASE TOLERANCE

NOTES

LGS4180E3 has the agronomics for high performance in the Central and Western U.S. and is an attractive plant with moderate branching and medium-tall plant structure.

NOTES

LGS4440E3[®]

4.4 RM

LGS4440E3 is a fantastic yielding product that has good agronomics. Ratings for SDS, Frogeye Leaf Spot, and PRR are high and it handles stress well.

Drought
tolerant

Strong
standability

Superior plant
health

CHARACTERISTICS

MANAGEMENT

DISEASE TOLERANCE

NOTES

LGS4518XF

4.5 RM

Adapted to a wide range of yield environments from low to high, the LGS4518XF plants are medium-tall and somewhat bushy, making it a good choice for the wider row spacings found in the Mississippi Delta. Use of Saltro[®] seed treatment is recommended when planted in fields with a history of SDS.

IDC tolerant

High yielding
product

Phytophthora
Root Rot
tolerant

CHARACTERISTICS

MANAGEMENT

DISEASE TOLERANCE

NOTES

LGS4640XF

4.6 RM 

LGS4640XF is suitable for double crop or first crop; manage height by lowering populations for first crop plantings. With its strong emergence, it is well suited to no-till or early plantings. Being both Sulfonyleurea herbicide tolerant and a Chloride Excluder extends the range of planting environments where it can be used.

UNSTOPPABLE SORGHUM SEED PROTECTION

AgriShield® seed treatments help protect your sorghum crop to deliver maximum yield potential harvest after harvest.

AgriShield® ST provides early-season protection against soil- and seed-borne diseases. It helps establish strong stands and improves root development to increase water and nutrient uptake.

AgriShield® MAX combines protection against early-season diseases and pests with a seed safener. It protects young plants against insects, disease, and herbicide injury and helps improve seedling vigor and tolerance to stressful conditions such as drought, cold, nutrient deficiency, and heat.

The AgriShield® PLUS treatment combines the disease protection of AgriShield® ST with a safener to protect sorghum crops from injury caused by crop sensitivity to S-metolachlor. It helps establish strong stands and improves root development to increase water and nutrient uptake.

AGRISHIELD® ST

Fungicide

AGRISHIELD® PLUS

Fungicide + Safener

AGRISHIELD® MAX

Fungicide + Insecticide with Safener

FUNGICIDES

Early season protection for consistent control against soil-borne and seed-borne diseases:

- Rhizoctonia
- Fusarium
- Pythium
- Downy mildew
- Seed rots
- Seed-borne diseases

+SAFENER

Enhanced crop tolerance for maximum control and high yields.

+INSECTICIDES

Powerful protection for control against a wide range of insects, including:

- Aphids
- Green bugs
- Chinch bugs
- Wireworms

PRODUCT RATINGS

Characteristics are assigned by LG Seeds based on comparisons with other Golden Acres® products (not competitive products) through in-house field testing. Individual results may vary, and performance may vary from location to location and from year to year. These results may not be an indicator of results you may obtain as local growing, soil, and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible. Maturities may vary according to planting date, growing conditions, and elevation.

PLANT CHARACTERISTICS—GRAIN

Plant Height

Height of plant in inches.

Head Type

Compact, Semi-Compact, Semi-Open, or Open.

Head Exsertion

Excessive, Favorable, Adequate, or Poor.

Days to Mid-Bloom

The number of days until mid-bloom occurs.

Grain Color

Color of the sorghum grain.

Seeds per Pound

Approximate amount of seeds per pound.

PLANT CHARACTERISTICS—FORAGE

Plant Height

Height of plant in feet.

Male Sterile

Indicates the plant is male sterile.

Brown Midrib

Indicates a brown midrib.

Brachytic Dwarf

Indicates a brachytic dwarf.

Seeds per Pound

1510C

Early

A proud legacy. A member of the LG Seeds family, Golden Acres sorghum products are time-tested and field-proven and have consistently yielded high-quality crops in diverse and demanding environments.

Excellent early option for Western KS, NE, and Northeast CO; performs well in other Northern areas.

High yields for an early maturity product with excellent agronomics and drought tolerance.

Good tolerance to Sugarcane Aphids and good performance on high pH soils.

Excellent option for drilling into narrow rows.

Early 

A proud legacy. A member of the LG Seeds family, Golden Acres sorghum products are time-tested and field-proven and have consistently yielded high-quality crops in diverse and demanding environments.

Early product offers strong agronomics paired with high yield and quality.

High performance under stress and excellent forage quality.

Manage placement in poorly drained and high pH soils.

LEGEND

AGRONOMIC CHARACTERISTICS

Fall Dormancy

Based on physiological maturity and harvest moisture.

Disease Resistance

Longer markers indicate higher resistance.

PLANT CHARACTERISTICS

Multifoliate Expression

Height of plant in inches.

Winter Hardiness Index

1 = Extremely Winterhardy

2 = Very Winterhardy

3 = Moderately Winterhardy

4 = Slightly Winterhardy

5 = Non-Winterhardy

PRODUCT RATINGS

Scores, characteristics, and data are determined by LG Seeds based on information provided by Alforex Seeds and Forage Genetics International, LLC. Performance may vary from location to location and from year to year, as local growing, soil, and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible and should consider the impacts of these conditions on the grower's fields.

TRAIT VERSIONS

This table contains the value-added trait versions currently offered for alfalfa:

CONVENTIONAL

Indicates a conventional (non-traited) product

Hi-Gest® Low Lignin Alfalfa Technology

HarvXtra® with Roundup Ready® technology

Roundup Ready® Technology

Roundup Ready® Alfalfa

StandFast® Alfalfa with Fast Growth

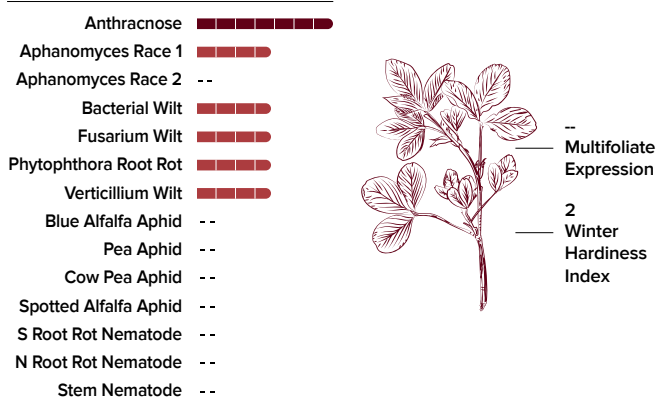

UltraCut™ Alfalfa Disease Package

CONVENTIONAL

A dependable variety that performs well across various cropping systems, Pro is great for growers looking to manage input costs while demanding a competitive variety for their alfalfa acres. It offers good pest and disease tolerance against key yield-robbing factors and adapts well to a wide range of environments.

DISEASE RESISTANCE

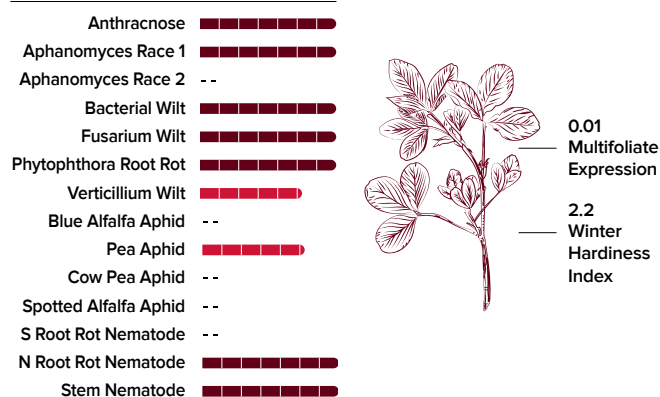

NOTES

CONVENTIONAL

Camas is a fall dormancy 4 variety, ideally adapted to the Western half of the U.S. It has a very high yield potential when compared to commercial checks and features impressive health, including resistance to seven major pests or diseases.

NOTES

CONVENTIONAL **Hi-Gest[®] Low Lignin**
ALFALFA TECHNOLOGY

Hi-Gest[®] alfalfa technology improves the rate and extent of fiber digestibility for enhanced animal performance. A product of conventional plant breeding, HG4001 maintains the yield, persistence, and multiple pest resistance packages of today's elite commercial varieties. It is very winterhardy with superior fall dormancy, high disease resistance, and multifoliolate expression. With very fast recovery following harvest, it stands well and exhibits good lodging tolerance.

NOTES

7C300

7.0 FD 

CONVENTIONAL

7C300 is adapted to primarily semi-dormant and non-dormant zones of the Western and Southwestern regions. Higher fall dormancy varieties tend to turn green faster in the spring and continue growing later in the fall which can make the difference when looking to gain an additional cutting during the growing season. It can handle an aggressive cutting schedule with fast recovery following harvest and excellent stand persistence and leaf retention.

AgReliant Genetics, LLC has successfully completed current Excellence Through Stewardship® (ETS) audit requirements for our representative North American operations and has in place stewardship programs and quality management systems consistent with the Excellence Through Stewardship® (ETS) program.

Bayer is a member of Excellence Through Stewardship® (ETS). Bayer products are commercialized in accordance with ETS Product Launch Stewardship Guidance, and in compliance with Bayer's Policy for Commercialization of Biotechnology-Derived Plant Products in Commodity Crops. Commercialized products have been approved for import into key export markets with functioning regulatory systems. Any crop or material produced from this product can only be exported to, or used, processed or sold in countries where all necessary regulatory approvals have been granted. It is a violation of national and international law to move material containing biotech traits across boundaries into nations where import is not permitted. Growers should talk to their grain handler or product purchaser to confirm their buying position for this product. Excellence Through Stewardship® is a registered trademark of Excellence Through Stewardship.

Corteva Agriscience is a member of Excellence Through Stewardship® (ETS). Corteva Agriscience products are commercialized in accordance with ETS Product Launch Stewardship Guidance and in compliance with the Corteva Agriscience policies regarding stewardship of those products. In line with these guidelines, Corteva Agriscience's product launch process for responsible launches of new products includes a long-standing process to evaluate export market information, value chain consultations, and regulatory functionality. Growers and end-users must take all steps within their control to follow appropriate stewardship requirements and confirm their buyer's acceptance of the grain or other material being purchased. For more detailed information on the status of a trait or stock, please visit www.biotechstatus.com. Excellence Through Stewardship® is a registered trademark of Global Stewardship Group.

Forage Genetics International, LLC ("FGI") is a member of Excellence Through Stewardship® (ETS). FGI products are commercialized in accordance with ETS Product Launch Stewardship Guidance, and in compliance with FGI's Policy for Commercialization of Biotechnology-Derived Plant Products in Commodity Crops. HarvXtra® Alfalfa with Roundup Ready® Technology has pending import approvals. GROWERS IN THE WESTERN STATES MUST DIRECT ANY PRODUCT PRODUCED FROM HARVXTRA® ALFALFA WITH ROUNDUP READY® TECHNOLOGY SEED OR CROPS (INCLUDING HAY AND HAY PRODUCTS) ONLY TO UNITED STATES DOMESTIC USE. Any crop or material produced from this product can only be exported to, or used, processed or sold in countries where all necessary regulatory approvals have been granted. It is a violation of national and international law to move material containing biotech traits across boundaries into nations where import is not permitted. Growers should talk to their grain handler or product purchaser to confirm their buying position for this product. Growers should refer to <http://www.biotechstatus.com/> for any updated information on import country approvals. Excellence Through Stewardship® is a registered trademark of Excellence Through Stewardship.

B.t. products may not yet be registered in all states. Check with your seed brand representative for the registration status in your state.

IMPORTANT IRM INFORMATION: RIB Complete® corn blend products do not require the planting of a structured refuge **except** in the Cotton-Growing Area where corn earworm is a significant pest. **See the IRM/Grower Guide for additional information. Always read and follow IRM requirements.** DroughtGard® Hybrids with RIB Complete® corn blend the refuge seed may not always contain DroughtGard® Hybrids trait.

IRM - Properly managing trait technology is key to preserving it as a long term crop protection tool. Growers who fail to comply with IRM requirements risk losing access to this product. To help preserve the effectiveness of B.t. corn technologies, growers planting B.t. corn technologies are required to follow an IRM Plan. Consult the Corn Product Use Guide for appropriate refuge configuration options. Before opening a bag of seed, be sure to read, understand and accept the stewardship requirements, including applicable refuge requirements for insect resistance management, for the biotechnology traits expressed in the seed as set forth in the Technology Use Agreement and Product Use Guide. By opening and using a bag of seed, you are reaffirming your obligation to comply with the most recent stewardship requirements. For complete details on IRM requirements for hybrids with Bt technology, including refuge examples and important information on the use of insecticides on refuge and Bt corn acres, please consult appropriate Product Use Guide. Go to www.corteva.us/Resources/trait-stewardship.html to download the latest Corteva Agriscience Corn Product Use Guide.

Performance may vary from location to location and from year to year, as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible and should consider the impacts of these conditions on the grower's fields.

No dicamba may be used in-crop with seed with Roundup Ready® Xtend Technology, unless and until approved or specifically permitted, and no dicamba formulations are currently registered for such use in the 2024 season. Please follow <https://www.roundupreadyxtend.com/pages/xtendimax-updates.aspx> for status updates.

ALWAYS READ AND FOLLOW PESTICIDE LABEL DIRECTIONS. It is a violation of federal and state law to use any pesticide product other than in accordance with its labeling. NOT ALL formulations of dicamba or glyphosate are approved for in-crop use with Roundup Ready 2 Xtend® soybeans. NOT ALL formulations of dicamba, glyphosate or glufosinate are approved for in-crop use with products with XtendFlex® Technology. ONLY USE FORMULATIONS THAT ARE SPECIFICALLY LABELED FOR SUCH USES AND APPROVED FOR SUCH USE IN THE STATE OF APPLICATION. Contact the U.S. EPA and your state pesticide regulatory agency with any questions about the approval status of dicamba herbicide products for in-crop use with products with XtendFlex® Technology.

Roundup Ready 2 Xtend® soybeans contain genes that confer tolerance to glyphosate and dicamba. Products with XtendFlex® Technology contains genes that confer tolerance to glyphosate, glufosinate and dicamba. Plants that are not tolerant to glyphosate may be damaged or killed if exposed to those herbicides. Plants that are not tolerant to glyphosate, dicamba, and/or glufosinate may be damaged or killed if exposed to those herbicides. Plants that are not tolerant to dicamba may be damaged or killed if exposed to those herbicides. Contact your seed brand dealer or refer to the Bayer Technology Use Guide for recommended weed control programs.

Important: Always read and follow label and bag tag instructions; only those labeled as tolerant to glufosinate may be sprayed with glufosinate ammonium-based herbicides.

More information about Duracade® is available at <http://www.biotechstatus.com/>.

Seed products with the LibertyLink® (LL) trait are resistant to the herbicide glufosinate ammonium, an alternative to glyphosate in corn, and combine high-yielding genetics with the powerful, non-selective, post-emergent weed control of Liberty® herbicide for optimum yield and excellent weed control. LibertyLink®, Liberty® and the Water Droplet logo are registered trademarks of BASF.

Corn trait technology incorporated into these seeds is commercialized under license from Syngenta Seeds, LLC. Herculex® Technology incorporated into these seeds is commercialized under license from Corteva Agriscience LLC.

Seeds containing the PowerCore® Enlist®, PowerCore® Enlist® Refuge Advanced®, and Enlist® Corn - REFUGE traits are protected under one or more U.S. patents which can be found at: www.traitstewardship.com. The purchase of this traited seed includes a limited license to produce a single crop in the United States. The use of seed from such a crop and/or the progeny thereof for propagation or seed multiplication or for production or development of a hybrid or different variety of seed is strictly prohibited. You acknowledge and agree to be bound by the terms and conditions of the following documents in effect at the time of planting of this seed: (i) the Corteva Agriscience Technology Use Agreement and (ii) the Product Use Guides for all technologies in this seed, including the Herbicide Resistance Management (HRM), and Use requirements.

To plant PowerCore Enlist, PowerCore Enlist Refuge Advanced, and Enlist Corn - REFUGE seed, you must have a limited license from Corteva Agriscience (or other appropriate affiliates). In consideration of the foregoing, Corteva Agriscience grants to the Grower a limited license to use its technology to produce only a single commercial crop in the United States under the terms and conditions set forth in the Technology Use Agreement in effect at the time of planting of this seed.

Enlist E3® soybean seeds containing the Enlist® trait can only be used to plant a single commercial crop. It is unlawful to save and replant Enlist E3® soybeans. Additional information and limitations on the use of these products are provided in the Corteva Agriscience Technology Use Agreement and Enlist® Soybean Product Use Guide. U.S. patents for Corteva Agriscience technologies can be found at the following webpage: www.corteva.us/Resources/trait-stewardship.html.

Following burndown, Enlist Duo® and Enlist One® herbicides with Colex-D® technology are the only herbicides containing 2,4-D that are authorized for preemergence and postemergence use with Enlist® corn and soybeans. Consult Enlist® herbicide labels for weed species controlled. Enlist Duo and Enlist One herbicides are not registered for use or sale in all states and counties; are not registered in AK, CA, CT, HI, ID, MA, ME, MT, NH, NV, OR, RI, UT, VT, WA and WY; and have additional subcounty restrictions in AL, GA, TN and TX, while existing county restrictions still remain in FL. All users must check "Bulletins Live! Two" no earlier than six months before using Enlist One or Enlist Duo. To obtain "Bulletins," consult epa.gov/essp/, call 1-844-447-3813, or email ESPP@epa.gov. You must use the "Bulletin" valid for the month and state and county in which Enlist One or Enlist Duo are being applied. Contact your state pesticide regulatory agency if you have questions about the registration status of Enlist® herbicides in your area. ALWAYS READ AND FOLLOW PESTICIDE LABEL DIRECTIONS. IT IS A VIOLATION OF FEDERAL AND STATE LAW TO USE ANY PESTICIDE PRODUCT OTHER THAN IN ACCORDANCE WITH ITS LABELING. ONLY USE FORMULATIONS THAT ARE SPECIFICALLY LABELED FOR SUCH USE IN THE STATE OF APPLICATION. USE OF PESTICIDE PRODUCTS, INCLUDING, WITHOUT LIMITATION, 2,4-D-CONTAINING PRODUCTS NOT AUTHORIZED FOR USE WITH ENLIST CORN AND SOYBEANS, MAY RESULT IN OFF-TARGET DAMAGE TO SENSITIVE CROPS/AREAS AND/OR SUSCEPTIBLE PLANTS, IN ADDITION TO CIVIL AND/OR CRIMINAL PENALTIES. Additional product-specific stewardship requirements for Enlist crops, including the Enlist Product Use Guide, can be found at www.traitstewardship.com.

For the 2024 growing seasons, growers must direct any product produced from HarvXtra® Alfalfa with Roundup Ready® Technology seed or crops (including hay and hay products) only to US domestic use. It is a violation of national and international law to move material containing biotech traits across boundaries into nations where import is not permitted. Growers should talk to their product purchaser to confirm their buying position for this product.

ALWAYS READ AND FOLLOW PESTICIDE LABEL DIRECTIONS. Roundup Ready® crops contain genes that confer tolerance to glyphosate, the active ingredient in Roundup® brand agricultural herbicides. Roundup® brand agricultural herbicides will kill crops that are not tolerant to glyphosate. Roundup Ready® and Roundup® are trademarks of Monsanto Technology LLC, used under license by Forage Genetics International, LLC. HarvXtra® is a registered trademark of Forage Genetics International, LLC. HarvXtra® Alfalfa with Roundup Ready® Technology is enabled with Technology from The Samuel Roberts Noble Foundation, Inc.

Important: Always read and follow label instructions. Some products may not be registered for sale or use in all states or counties. Please check with your local extension service to ensure registration status. Syngenta supports a FIFRA Section 2(ee) recommendation for Salfro for suppression of Red Crown Rot in AR, IL, IN, IA, KY, MO and TN. Please see the Section 2(ee) recommendation to confirm that the recommendation is applicable in your state. The Section 2(ee) recommendation for Salfro should be in the possession of the user at the time of application.

Due to the unique cropping practices do not plant Roundup Ready® Alfalfa in Imperial County, California, pending import approvals and until Forage Genetics International, LLC (FGI) grants express permission for such planting. IN THE FOLLOWING STATES, PURCHASE AND USE OF HARVXTRA® ALFALFA WITH ROUNDUP READY® TECHNOLOGY IS SUBJECT TO A SEED AND FEED USE AGREEMENT, REQUIRING THAT PRODUCTS OF THIS TECHNOLOGY CAN ONLY BE USED ON FARM OR OTHERWISE BE USED IN THE UNITED STATES: ARIZONA, CALIFORNIA, COLORADO, IDAHO, MONTANA, NEVADA, NEW MEXICO, OREGON, UTAH, WASHINGTON AND WYOMING (THE "WESTERN STATES"). IN ADDITION, DUE TO THE UNIQUE CROPPING PRACTICES DO NOT PLANT ROUNDUP READY® ALFALFA OR HARVXTRA® ALFALFA WITH ROUNDUP READY® TECHNOLOGY IN IMPERIAL COUNTY, CALIFORNIA, PENDING IMPORT APPROVALS AND UNTIL FORAGE GENETICS INTERNATIONAL, LLC (FGI) GRANTS EXPRESS PERMISSION FOR SUCH PLANTING.

Before opening a bag of seed, be sure to read, understand and accept the stewardship requirements, including applicable refuge requirements for insect resistance management, for the biotechnology traits expressed in the seed as set forth in the Technology/Stewardship Agreement that you sign. By opening and using a bag of seed, you are reaffirming your obligation and agreement to comply with the most recent stewardship requirements.

Think Before You Bin Run

Verification Required The last patent on the original Roundup Ready® soybean trait expired a few years ago and U.S. farmers may legally plant saved seed from some varieties of soybean containing the Roundup Ready® soybean trait. However, it is important that you check with your seed supplier to determine if a specific Roundup Ready® soybean variety is covered by other intellectual property rights, and if so, the policy for saving seed of that variety.

Higher Seeding Rate A higher seeding rate may be required for bin-run Roundup Ready® soybeans compared to new branded seed.

Yield Loss Roundup Ready 2 Yield® soybean, Roundup Ready 2 Xtend® soybean, and XtendFlex® soybean varieties typically have a higher yield opportunity than Roundup Ready® soybean varieties.

Cleanout Loss Loss of seed and/or shrink occurs during the seed cleaning and handling processes for bin-run seed.

Seed Treatment Costs Treating your seed will add costs—both the cost of the treatment and the application of that treatment.

Lost Income Every bushel of saved seed you plant is a bushel you're not selling as commodity grain.

Increased Seed Management If you plan to save and bin-run Roundup Ready® soybeans for planting, you will have to manage your harvest operations and grain storage so that the seed isn't co-mingled with other seed that's covered by intellectual property rights.

High Value of New Branded Seed

Latest Technology

- // High-yielding soybean technologies
- // Better variety options
- // Leading seed treatment options

Customer Service

- // Dealer agronomic support before and after the sale
- // Replant policy support
- // Convenient packaging and delivery

Reliable Germination and Quality

- // Rigorously tested and meets U.S. Federal Seed Act requirements
- // Free of seed-borne diseases
- // Properly stored and conditioned

For a list of Bayer's trait patents go to cs.bayerpatents.bayer.com

For questions regarding seed intellectual property, or to anonymously report a saved seed tip, you can contact Bayer in the following ways:

1. Call 1-866-99-BAYER
2. Send a letter: Trait Stewardship, 622 Emerson Rd., Suite 150, Creve Coeur, MO 63141
3. Submit a contact request at cropscience.bayer.us/contact or scan the QR code

ENLIST® WEED CONTROL SYSTEM—PROVEN CONTROL OF TOUGH WEEDS

Enlist Duo® and Enlist One® herbicides with Colex-D® technology are the only herbicides containing 2,4-D that are authorized for preemergence and postemergence use on Enlist® crops.

SOYBEANS 2,4-D choline | Glyphosate | Glufosinate

CORN 2,4-D choline | Glyphosate | Glufosinate | FOP Herbicides

- Convenient proprietary blend of 2,4-D choline and glyphosate
- The two sites of action work together to deliver control of yield-robbing weeds and help prevent resistance

- Straight-goods 2,4-D choline with additional tank-mix flexibility
- Provides additional tank-mix flexibility with Liberty® herbicide and other qualified tank-mix products, allowing for a customized weed control program to fit each farm

On-Target Application

- 90% less drift than traditional 2,4-D
- 96% less volatile than 2,4-D ester

We'd like to work with you.
